

BEYOND INSIGHTS[®]

Technology Product Manager

Job Description

A Great Product Manager

**Define and create the right product that adds value to investors and traders.
And that's probably the most rewarding job for yourself and the company.**

If you love ...

Building technology related product that is beyond excellence and could help people change their lives through financial education, we have the position you are looking for.

Beyond Insights' mission is to *"bring out the best in you and your financial future"*. We are the leading education service provider in the country in the area of global stock market investing and trading.

We are now investing in building technology that can help us educate more people in an even more impactful, effective and personal way. Having a great Software Architect will help us to achieve what no companies have done before – to make professional investing and trading knowledge publicly accessible, and to make financial success achievable for everyone who has the desire and discipline to pursue it.

What are we doing now...

- Continuous improving and enhancing our current products.
 - Education Products (Investment and Trading Courses)
 - Technology Products (Ie. BiTS, Student Portal)
- Designing new technology products that will help students to excel in their investment and trading journey.

And we are excited about the upcoming 5 years because we are:

- Creating more effective ways of learning through [EdTech](#) development.
- Design and create new digital products and services that will empower students.

Your responsibilities...

- ✓ **Product Strategy & Roadmap:** Define and drive the technology product vision and strategy in alignment with Beyond Insights' overall business objectives. Develop and maintain a product roadmap based on market trends, customer feedback, and business priorities.
- ✓ **Product Development:** Lead the end-to-end product development process, from ideation to launch, ensuring timely delivery of high-quality digital products. Collaborate with UX/UI designers, engineers, and data scientists to create user-centric solutions.
- ✓ **Stakeholder Management:** Work closely with internal stakeholders, including trainers, coaches, and business teams, to gather requirements and ensure alignment on product goals and timelines.
- ✓ **Customer-Centric Research:** Understand customer needs and challenges by conducting research, gathering feedback, and analyzing user behavior. Use these insights to develop features and solutions that enhance the learning and trading experience.
- ✓ **Data-Driven Decision Making:** Utilize data and analytics to measure product performance, identify improvement opportunities, and make informed decisions on product enhancements and new initiatives.
- ✓ **Project Management:** Lead multiple projects simultaneously, ensuring efficient resource allocation, risk management, and issue resolution. Communicate project status, progress, and results to stakeholders effectively.
- ✓ **Technology Partner Management:** Engage and manage relationships with technology vendors, third-party providers, and contractors to deliver product requirements and support business growth.
- ✓ **Product Documentation & Training:** Create comprehensive product documentation and provide training to internal teams on new features and product updates.

What is required of you...

- ✓ **Great problem solving skills.** We believe this is a most important asset for any job role, and especially for a Product Manager. You will go through a problem solving ability assessment to demonstrate your ability in this area.
- ✓ **Passionate about improving students' learning experience and students' success.** Product managers are customer centric. Focused on creating products that will not only generate revenue but improve students' learning experience and students' success.
- ✓ **Good communication and stakeholder management skills.** Obviously, this role require a lot of communication. You will be given chance to hone your communication skills and manage your stakeholders.

What is required of you...

- ✓ **Ability to develop technology solutions.** As we are gearing towards digital education, a product manager will also be expected to be well informed of advancement in technology such as cloud computing services, LLM, blockchain etc.
- ✓ Ability to use business intelligence tools (such as PowerBI, Tableau) and/or designing tools (Figma).
- ✓ Familiarity with languages for data mining and analytics, such as Python and SQL is an added advantage.
- ✓ **Self-driven, creative, innovative, and willing to learn and explore new concepts or ideas.**

* What comes with the career ...

- ✓ An above average monthly income and annual bonus commensurate with your qualification and/or experience.
- ✓ Sponsorship to the award winning and highly valued Beyond Insights program to help you create a sustainable source of wealth. You are working in a company that excels in financial education, so you can expect to accelerate your knowledge in wealth generation as well.
- ✓ Above average compensation and benefits that include insurance on hospitalization and personal accidents, medical, dental and even optical fee claims, gym membership subsidy etc.
- ✓ Further education and training – we believe in continuous learning and we want all our team members to strive for excellence in character and abilities. On the job – you will be stretched out of your comfort zone and grow in your professional, leadership and financial skills every day.
